Subject:

Mercury Emission Reduction Requirements for Electric Generating Units (#7-405)

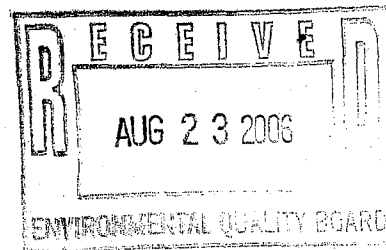

As a Pennsylvania resident, I strongly support the DEP's proposed mercury emission rule to reduce mercury emissions from coal-fired power plants 90% by 2015. PA is the second largest source of mercury pollution in the U.S. We know that mercury is dangerous for children, and the fish across our state are contaminated.

I urge you to oppose any pollution trading rules for mercury, and require all coal plants in PA to reduce their mercury emissions. Please enact the DEP's mercury reduction proposal as soon as possible. Our and your children's health is at stake, and they deserve protection today!

Thank you,

TO: Members of the Environmental Quality Board
RE: Pennsylvania Specific Mercury Reduction Rule

The Environmental Protection Agency's (EPA) federal mercury rule will result in more mercury in our air and water than simply fully enforcing the Clean Air Act. PA is currently the 2nd worst polluter of mercury from coal-fired power plants in the country. PA coal is also higher than most in chlorine content which makes it more apt to fall closer to it's source. Our children deserve to grow up in a state that leads the way on reducing mercury pollution. I encourage the adoption of Governor Rendell and the Department of Environmental Protection's (DEP) proposed PA specific mercury rule which aims to reduce mercury pollution by 80% in 2010 and 90% in 2015 at all applicable sources, and prohibits the trading or netting of mercury pollution credits. We have the opportunity to protect our families' health and safety by implementing a PA specific mercury reduction rule as soon as possible for the sake of our community and our children's health.

I am very concerned about the effects of mercury on our health.

Re: Mercury Reduction Requirements for Electric Generating Units
#7-405

Dear Sir/Madam,

I am very concerned about the continued release of mercury into the environment. Based on the latest research about the amount of mercury which is finding its way into the environment and into the food chain, I have changed found it necessary to reduce the amount of fish my family eats. In light of the toxicity of mercury and the documented amounts which are being found in tuna, swordfish, salmon and other fish I believe it is necessary to take a strong stand and support legislation which reduces all coal plant emissions and does not allow mercury trading. I believe this is the only way to take back our waterways and our health.

Sincerely,

S. K. Guggenberger

Re: Mercury Emission Reduction Requirements for Electric Generating
Units (#7-405)

Dear Board Members,

My wife & I are registered voters in Delaware County, PA, and we support the reduction of mercury emissions in this DEP proposal. If you know about the Minimata Bay poisonings in the 1950's & 60's – or if you have ever seen the photographs of the children affected by the mercury contamination of the food chain – then you know that mercury in the sediment can intensify as it moves through aquatic organisms into fish and humans. Given the sport, recreational and practical (food) use of Pennsylvania's waters, it seems wise to reduce mercury emissions as low as possible.

Thank you for your consideration.

Respectfully,

Gary J. Pascuzzo

RE: MERCURY EMISSION REDUCTION REQUIRMENTS FOR ELECTRIC
GENERATING UNITS (#7-405)

If you've ever seen anyone with mercury poisoning (as I have) it is ugly. Doctors couldn't figure out what was wrong; for two years. She lost weight, memory function declined significantly, she lost most of her hair and she was debilitating tired all the time. She had to quit her job and someone had to help her with every day chores. Finally a doctor figured it out. She had been eating lots of fish that her husband would bring home every weekend from the shore. Her recovery has been slow, painful and she is just now starting to feel like herself.

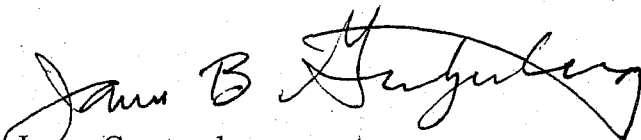

My opinion is if emissions can be reduced by 90% let's do it! Everyone screams about the cost of being an environmentally responsible member of this planet but can we really afford not to be.

Thank you for your time.

Subject : Mercury Emmission Reduction Requirements for Electric Generating Units
(#7-405)

To Whom it May Concern,

I support the DEP proposal to require coal fired power plants to cut their mercury emissions. High levels of mercury in the drinking water and in fish have been linked to some serious health problems, such as anemia and thyroid disease.

I do not, however, wish to perpetuate the myth that mercury causes autism. This is a particularly dangerous belief because it adds weight to the rumors about vaccines and their connection to autism.

Nonetheless, I do support this proposal. An overall reduction in mercury pollution would certainly make our drinking water safer and, perhaps, our local fish healthier.

Regards,

Jeffrey Moffo
Teacher

Re: *Mercury Emission Reduction Requirements for Electric Generating Units (#7-405)*

Dear Sir/Madam:

I'm writing in strong support of your proposal to require coal fired power plants to cut their mercury emissions 90 percent, as of 2015.

It is my understanding that Pennsylvania's power plants are the second largest emitters of toxic mercury in the United States. The Fish and Boat Commission has issued advisories that cover every lake, river, and stream in the state, warning everyone to severely limit their eating of fish caught here. This situation puts everyone at risk, but in particular, women and children.

I'm a proud citizen of this state and have always represented to other Americans and foreign nationals as a wonderful place to visit. However, with regard to the issue of water contamination in general and mercury pollution in particular, I feel more than a little ashamed of our record.

So again, with the health of our children at stack, I strongly urge you to adopt DEP's proposal to require all coal plants to reduce their polluting.

Sincerely,

E. A. Tremblay

Re: Mercury Emission Reduction Requirements for Electric Generating Units

I am not generally a politically active person, nor am I particularly eloquent. The case for controlling mercury emissions, however, has prompted me to write to you and ask that you take strong action in requiring coal fired power plants to reduce their mercury emissions.

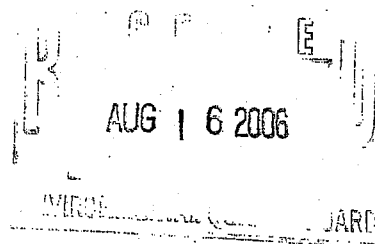

Mercury levels in Pennsylvania are among the highest in the nation. There is no question about the toxicity of this chemical and the damage it is doing. The mercury will not magically go away but will remain in our ground, in our water, and therefore in our food chain for generations. The long term price we all will pay for this far outstrips any immediate lost profits to the power industry if we do not enact strong legislation now.

Please. It is time to take an honest look at the situation and take realistic action. Do not let the polluters and their lobby destroy our state's environment.

Yours truly,

Margret Skitarelic

RE: Mercury Emission Reduction Requirements for Electric Generating Units (#7-405)

Dear Board Member:

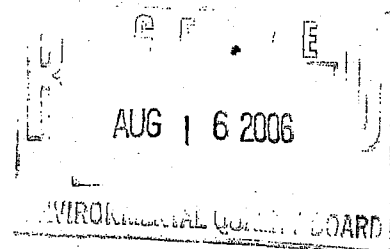

I have written to express my feelings about mercury toxicity levels. I am twelve years old and extremely concerned that by the time I am an adult the world will be filled with mercury and poisons of its ilk. This is especially a concern for me because mercury is very dangerous to children.

Previously, we have lowered emissions of other poisons like sulfur, and power companies did not die as a result. So mercury should not be any different. If power companies can afford to have extremely rich executives they can afford expensive equipment to clean up our air.

Sincerely,

Ben Sobel

RE: Mercury Emission Reduction Requirements for Electric Generating Units (#7-405)

Dear Board Member:

I am writing to express my support for the proposal of the Department of Environmental Protection to require coal-fired power plants to cut their mercury emissions 90% by 2015. Given the extraordinary toxicity of mercury and the length of time it remains in the environment it is truly surprising that emissions are allowed to be at their current levels.

Mercury is hazardous to just about every form of life. Because of its effect on neurological systems, it is particularly dangerous for humans. Children are especially susceptible to mercury poisoning. It seems hard to believe that we would not do everything possible to protect them.

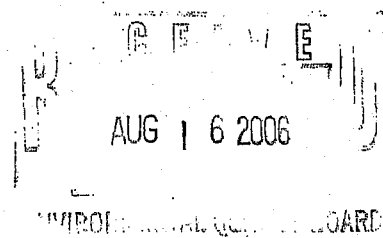

I realize that the coal and electric power industries have argued that they cannot afford to put in expensive equipment, but it is equally unfair for us to pay with our health and our tax dollars. At some point mercury has to be cleaned up and I think these industries should have to do their fair share. Every time they have been asked to decrease pollutants they have fought it, but in the last 30 years we have made significant progress in the environment and the sky has not fallen on businesses.

Please do everything in your power to make this a cleaner and better world by making this very reasonable requirement to curb a dangerous pollutant.

Sincerely,

Marilyn Sobel

To Whom It May Concern:

I am writing this letter to you to express my concern over the increasing amounts of mercury that is polluting our waters. I strongly support the DEP proposal to require coal fired power plants to cut their mercury emissions 90% by 2015.

The health of our children is at risk and I urge you to oppose any pollution trading plan. ALL coal plants need to reduce their mercury pollution!

Sincerely,

Nina C. Sabatino

Dear Board Members,

I support the DEP proposal to require coal fired power plants to cut their mercury emissions 90% by 2015. I am a mother of two and our kids' health is at stake. Please oppose any pollution trading plan.

I am also a Second Grade Teacher in the Garnet Valley School District. I am the Social Studies Curriculum Coordinator for my building. This summer I will be meeting at the Heinz Center in Tincum to write Social Studies / Science Curriculum in Environmental Education for all of the schools in Delaware County Pennsylvania.

I will talk to other teachers throughout the County about this grave situation. I realize the coal industry is influential, but we must lower the mercury levels in our waters. Our children are in danger and they are our future.

I would love a response to my concerns. You may write me at the above address.

Sincerely,

Andrea Shearn

RE: Mercury Emission Reduction Requirements
Pennsylvania Mercury Issues

To: Environmental Quality Board
Senator Pileggi
Clean Water Action
Citizen's for Pennsylvania's Future
Etc.

Mercury is a poison that can kill a human.

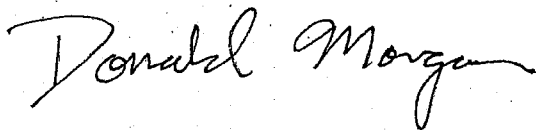

Infinitesimally small traces of mercury introduced into a young child's developing body (including the mind) can have tragic effect.

Mercury can smack an innocent child into a life rife with physical struggle and developmental chaos.

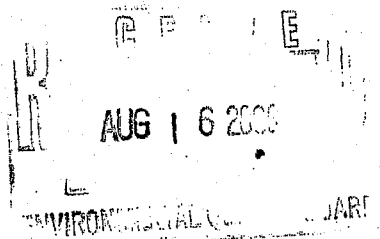

I plead, yes, I plead, that those with a say do all that is possible to reduce the levels of mercury currently being fed to our children and our eco-system.

Please contact me if I can further assist.

Sincerely,

Donald Morgan
Husband to One
Father to Three
Teacher of English

P.S. This letter may be copied and distributed freely.

July 10, 2006

Dear Environmental Quality Board,

I am writing on behalf of my concerned family. We strongly support the DEP proposal to require coal fired power plants to cut their mercury emissions 90 % by 2015.

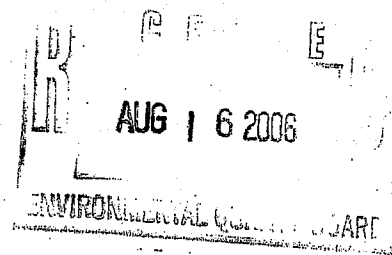

I am a 6th grade student and I have found out that my own health is at stake! Actually, not just me, but my peers and many other children's health are at stake! One in six women already have mercury levels in their blood that could cause mental retardation or other health problems for their children. Are you just going to ignore that? I urge you to oppose any pollution trading plan and to make sure all coal plants reduce their mercury pollution.

Take into consideration what I have said above, and make decisions that are healthy for everyone in Pennsylvania.

Sincerely,

Neve Sivagnanam

To EQB,

As a mother of 4 children I am highly concerned about the mercury content in our waterways which of course effects the fish we all eat.

I am personally affected by this for my brother got mercury poisoning from eating tuna fish daily. Surprisingly he was shocked for he's both young and physically fit, and yet this stopped him in his tracks. (he runs 8-10 miles 3x week).

Please do everything in your power to better our waterways
Thank You
Jessica Jones

To Submit My Concern @ Environmental Quality Board

We support legislation to require coal power  
water plants to cut their mercury emissions at  
least 90% by 2015. Personally, I can't believe  
that it's necessary to request such legislation  
and action on such an important issue. We  
must start now to ~~please~~ take care of "our" world.

Sincerely,  
  
Mark Santaros

SUBJECT: Mercury Emission Reduction  
Requirements for Electric Generating Units  
(# 7-405)

Dear Board members:

I am writing you to urge you to support the proposal to require coal fired power plants to cut their mercury emissions 90% by 2015.

I also ask you to oppose any pollution trading plan, and to ensure that all coal plants reduce their mercury pollution.

It's the "right" thing to do, for our environment, the health of all Pennsylvanians and the State's image.

Thank you for considering my comments.

RE: "Mercury Emission Reduction Requirements  
for Electric Generating Units (#7-405)"

I must say, I was mortified to learn that Pennsylvania is #2 in the US for mercury emissions in the US from coal-fired power plants, that need a 90% reduction of mercury pollution!

Please be advised, by my written statement, I support DEP in their efforts to reach this 90% goal by 2015. Our children today are suffering from so many unusual health concerns for their ages. I'd be a fool to think that, mercury, a well known harmful element was not a player in all of this!

I ask that you not disappoint your community and that you would encourage the concept of "every vote counts - and the consumer is always right".

**I support the DEP's proposed Pennsylvania Mercury Rule!**

- Mercury from power plants is toxic. Even small amounts can harm our most vulnerable: developing babies and children.
- Pennsylvania power plants account for 83% of the state's mercury pollution, and are the second worst in the nation.
- Mercury pollution falls out close to the source, leaving us with dangerous areas of high contamination near power plants.
- The federal rule fails to protect us, allowing dirty plants to buy pollution credits from clean ones in other states.

Sirs:

I have to assure that the members of the EQB have children and grandchildren — and also breathe and exist — here in Pennsylvania! Then why should other citizens have to plead with you to speed up the reduction of mercury pollution in this state? The science is incontrovertible! And whatever "savings" would accrue through delay would be more than consumed by health costs — financial and human.

Accept the PA DOE plan and do yourselves and your fellow-citizens a huge and necessary favor.

Other steps must also be taken. There is mercury in batteries, switches and the highly-touted fluorescents we're to use in our lamps — to save energy. We need

**Legislation aimed at stopping the DEP's Pennsylvania Mercury Rule is harmful! I oppose HB 2610 and SB 1201 because:**

- These bills won't clean up toxic mercury. They instead require Pennsylvania to follow an illegal federal rule that delays mercury reductions for decades, creating a trading scheme allowing mercury hotspots near dirty power plants to continue.
- Pennsylvania power plants are now the 2nd worst mercury polluters in the country, and put out 83% of mercury to our air.
- Babies are at high risk of lifetime health problems from mercury, since it can destroy their developing brains and neurological systems both before and after birth.

Dear EQB,

I support the DEP proposal to require coal fired power plants to cut their mercury emissions 90% by 2015. Our health is at stake and I urge you to oppose any pollution trading plan and to make sure all coal plants reduce their mercury pollution.

Thank You.

(Resident)

Dear EOB,

As a strong supporter of the EP I am in  
favor of the bill to cut emissions by 90%. Our  
planet gets beaten up enough by SUV drivers. Also  
please oppose pollution trading + do your part!

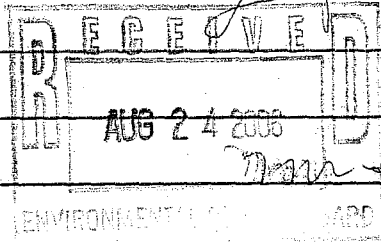

Sincerely,

(John Burn)

Dear E. B.

I support the WEP proposal to require coal fired power plants to cut their mercury emissions 90% by 2015. I oppose any pollution trading plan and to make sure all coal plants reduce their mercury pollution.

I support the DEP proposal  
to require coal fired power  
plants to cut their mercury  
emissions 90% by 2015.

Please ensure all coal plants  
reduce their mercury pollution.

Kathy L. Russo

## Environmental Quality Board

In an effort to protect the health of our children, please oppose any Pollution trading plan. It is necessary that all coal plants reduce their mercury pollution.

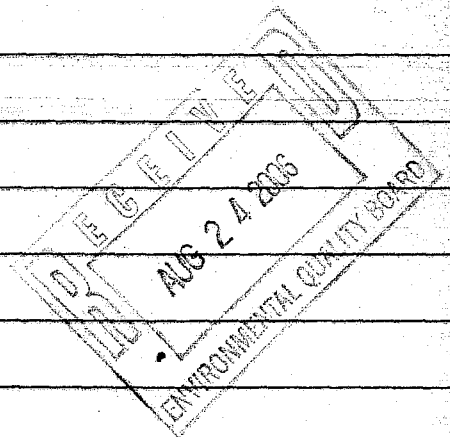

Since PA is #2 in the US for mercury emissions from coal-fired power plants, a reduction is necessary.

This is especially important for both women and children and should be addressed with urgency.

Thank you,

(Resident)

AUG 24 2006

Dear Environmental Quality Board,

I am writing to support the state moving forward with the DEP's state-level proposal to cut mercury pollution from Pennsylvania's coal-fired power plants by 90% by the year 2015.

Coal-fired power plants are the largest source of unregulated mercury pollution to our waterways and contaminates the fish that find their way to our dinner plates. This is a significant hazard to our children. Medical experts say that even low levels of mercury exposure can affect the way children learn, think, memorize and behave. Technology to cut mercury pollution by 90% already exists.

I strongly support DEP's efforts to require these cuts without allowing for mercury "credit" trading.

With the Bush Administration weakening federal mercury protection, it is essential for the state to take the lead to protect our environment and the public's health by cutting pollution from Pennsylvania's power plants.

My name is Cheryl Smelte and I am writing you to tell you that I support the DEP proposal. Their proposal is for coal fired power plants to be required to cut their mercury emissions 90% by 2015. I just learned that Pennsylvania is #2 in the United States, for high mercury emissions. This is completely unhealthy for everyone including our children. I am a new mother and I am for anything that will be better for my child. Actually for any child because it is our job to make sure that things are safe for future generations.

If the coal and electric companies issue against the DEP proposal is money and how they will finance these changes, it should be the last thing they are thinking about. I am sure the people in charge of the coal and electric companies have families. I am sure that they want the best for their loved ones, so why not for everyone else.

In closing I believe the DEP proposal should be required and

TO: Members of the Environmental Quality Board  
RE: Pennsylvania Specific Mercury Reduction Rule

The Environmental Protection Agency's (EPA) federal mercury rule will result in more mercury in our air and water than simply fully enforcing the Clean Air Act. PA is currently the 2nd worst polluter of mercury from coal-fired power plants in the country. PA coal is also higher than most in chlorine content which makes it more apt to fall closer to it's source. Our children deserve to grow up in a state that leads the way on reducing mercury pollution. I encourage the adoption of the Department of Environmental Protection's (DEP) proposed PA specific mercury rule which aims to reduce mercury pollution by 80% in 2010 and 90% in 2015 at all applicable sources, and prohibits the trading or netting of mercury pollution credits. We have the opportunity to protect our families' health and safety by implementing a PA specific mercury reduction rule as soon as possible for the sake of our community and our children's health.

Protecting the environment protects us, because we eat, breathe, and drink the environment.
