Subject: Docket #2783 and Docket #2806, Erosion and Sedimentation Control and Wastewater

Commissioners Coccodrilli, Bedwick, Lutkewitte, Mizner, and Fineman:

RE: Docket Number #2783 [EQB 7-440: Erosion and Sedimentation Control]

RE: Docket Number #2806 [EQB 7-446: Wastewater]

I wish to let the commission know that as a long time resident of the State of Pennsylvania I am concerned about the quality of our water both drinking water and waterways, streams and rivers in general.

I know that ill-advised or careless drilling for gas can and has had detrimental, even devastating effect, on ground water including public drinking water. We must make certain that this does not happen in Pennsylvania. The way to do that is to pass the proper laws and regulations instructing industry to drill wisely and carefully. Once damage is done, it may not be undone in our lifetimes.

Simple ideas, such as maintaining trees and vegetation as a buffer around rivers and streams is both very effective and low-cost and is an example of how smart simple actions can do all of us a lot of good. I hope we have the wisdom to enact them.

Cover the well, before the child falls in, please.

Thank you,
