IRRC Members,

Please add my voice to those concerned Pennsylvanians who are urging you to approve Chapter 102 (2783) and Chapter 95 (2806). Both of these regulations commonsensibly will help keep PA's waterways a little cleaner and safer for our following generations.

I am a medical worker....the last thing I want to see is disease induced by environmental toxins that should never have been injected into the ecosystem during drilling. It is bad science, bad medicine. . . there's no need to make people sick. We have not learned that Love Canal in NY did not just *happen*-----it was a manmade ecological disaster.

Thank you for listening to a fellow Pennsylvanian,

Best regards,

Robert Colgan  
Hanover PA
