Subject: Drilling Wastewater

Message:

I strongly support new and stringent standards for drilling and hydrofracing wastewater discharge from both a TSD and hazardous contaminant perspective. PA has spent many years and countless dollars cleaning up our waterways. We must not only protect this investment but also protect our drinking water sources. I came from a highly regulated business, and protecting resources and our environment are simply part of the cost of doing business. If drillers claim they cannot afford these basic public responsibilities and protections, then drilling should not proceed. Thank you for your consideration.
