Subject: Public Input Sought on Proposals to Strengthen Oil & Gas Well Protections

I would like to say that having leased my property for gas exploration and hearing and reading about all of the people that have encountered well water contamination, I am troubled that the DEP standards have not done the job of protecting our water resources in our great state. Please implement and most importantly ENFORCE more stringent laws and guidelines to insure our water stays the way it was before and after gas drilling, and extracting. We the people of the state are counting on our DEP to put pressure, and lots of it on the drilling and Gas Company's to keep our water safe. There is NO reason that the company's contaminating well water in our state cannot do the job properly and safely. Once it has been done wrong you cannot go back and do it correctly. Thank you very much for providing me with convenient communication with the DEP.
