Subject: Proposed regulatory change for Marcellus Shale Drilling

Folks ,

I represent a social and environmental project called Mildred's Lane, it is my home in Pennsylvania, in Wayne county, on the border of NYstate, where thinkers, writers, artists, scientists, and others come form all over the world to converse about our lives, our world and our futures.

What use is it for NYState to place a moratorium on this atrocious situation, this threat to our environment, wildlife, homes, families, communities? It is ripping my community apart.

We, as a social collective cannot let this happen, in a time when we need to support each other toward constructive change for the future of our entire U.S. society!

PLEASE, stop the test drilling, there are alternatives, there are other monies to be made, there are ideas...

But if this continues, it will be to the detriment of this nation of human and non-humans. Please stop the drilling altogether, PLEASE pursue alternative energy sources and leave this planet to heal.

Most heartfelt,

J. Morgan Puett
