At this time I feel there need to be more stringent regulations on the gas drilling going on in PA. It is abhorrent the one of the activities that could most blatantly affect our natural resources is exempt from the clean air and water act in PA. As citizens we have the right to know our natural resources that are life-supporting are protected. Just as the gas companies may claim that having inexpensive natural resources such as gas are important, even more so are our water and air. For this reason I support DEP's proposal for tougher standards on the oil and gas drilling activities.
