Please enact regulations that would require gas drilling operators to build stronger and safer wells, disclose the toxic chemicals used in the gas extraction process, and require the Pennsylvania Department of Environmental Protection to conduct more and better inspections of these wells.

The safety and protection of our environment and public health is included in the Pennsylvania Constitution, and it is crucial to protect these rights by not allowing any further damage to be done through natural gas drilling. PA needs to follow NY state in placing a moratorium on any further permits for natural gas drilling for the time being, provide more extensive inspections on already existing wells, make a complete and thorough study of the effects of drilling, especially hydraulic fracturing on the land and on people, and enact strict punishments to offenders of regulations.

We am totally against drilling on any federal park or any other kind of parkland in the state!

Thank you
