Comments entered:

Dear PA Environmental Quality Board,

Public health and the environment need to come first before private profits. I urge the Department of Environmental Protection to fully consider its mission to public health and the environment before finalizing its proposed revisions to Chapter 105, governing dams, water obstructions, and encroachments into aquatic resources.

The Department should reconsider its proposal to require a company seeking a permit for an industry activity that crosses multiple counties – like a pipeline – to submit only one application, rather than needing to go to each county the activity touches. This will make it harder for the counties and their residents to learn about proposed industrial activities that might affect their waters and therefore make it harder for citizens to participate and have a voice in the process.

Second, the Department should also be revising these regulations to protect our wetlands and waterways and make it harder for industry to negatively impact them. Instead, the Department is making it easier for industry to get permits or evade the permitting process altogether by expanding the number of activities eligible for a waiver out of the permitting process. Because some Pennsylvania bodies of water are so important or threatened, there should be no waivers

allowed for activities in these waterways, no matter how small the stream size. The Department should reduce, not expand, the number of waivers granted, and should not allow any waivers for activities impacting EV, HQ, Class A, wild trout, or already impaired streams.

Unfortunately we cannot rely on industry to do the right thing and it is in the best interest of Pennsylvanians health and environment to have DEP continue to hold industry accountable and be proactive in that effort.

Thank you for your consideration.

Sincerely,
